

## ECO CDOM Fluorometer Characterization Sheet

Date: 5/26/2010

S/N: CD2000-1856

CDOM (Quinine Dihydrate Equivalent) concentration expressed in ppb can be derived using the equation:

$$\text{CDOM (QSDE)} = \text{Scale Factor} * (\text{Output} - \text{Dark Counts})$$

	Analog Range 1	Analog Range 2	Analog Range 4 (default)	Digital
<b>Dark Counts</b>	0.065	0.040	0.027 V	40 counts
<b>Scale Factor (SF)</b>	25	50	100 ppb/V	0.0304 ppb/count
<b>Maximum Output</b>	4.97	4.97	4.97 V	16380 counts
<b>Resolution</b>	2.9	2.9	2.9 mV	2.9 counts
Ambient temperature during characterization				22.3 °C

**Analog Range:** 1 (most sensitive, 0–4,000 counts), 2 (midrange, 0–8,000 counts), 4 (entire range, 0–16,000 counts).

**Dark Counts:** Signal output of the meter in clean water with black tape over detector.

**SF:** Determined using the following equation:  $SF = x \div (\text{output} - \text{dark counts})$ , where  $x$  is the concentration of the solution used during instrument characterization. SF is used to derive instrument output concentration from the raw signal output of the fluorometer.

**Maximum Output:** Maximum signal output the fluorometer is capable of.

**Resolution:** Standard deviation of 1 minute of collected data.
